# Luströ

Luströ - that means a place to feel good - and to come back.

Luströ - that are coherent and unique room concepts with durable equipment, a maximum of functionality, comfort and design.

The stylish Luströ-designs convey from furniture to noble table lamps a cozy flair and an atmosphere that perfectly fits the personality of the room and makes every corner a bit more inviting.

To guarantee sustainability, we use the highest quality materials based on many years of experience, which defy wind, weather, humidity and moisture.

Different factories specializing in the production of high-end furniture for the most prestigious upscale restaurants, companies or households. Also through years of experience in being successful and sustainable on the market, we also work day after day on new designs on any customer request!

As a perfectly matching style element, we offer coziness and feel-good guarantee, of course, completely according to the ideas of the interior designers.

Style meets creativity - individual and comfortable.

Your LUSTRÖ team.

# Swiss Ideation

Our pursuit of excellent results and designs has created a selection that perfectly matches the individual needs and desires of our customers.

Luströ is specialized in outdoor areas in addition to indoor areas due to the robust materials. Thus, the cozy flair can be wonderfully projected outside. Countless customers worldwide trust in our noble designs.

The quality assurance in Switzerland contributes a large part to this.

2023

# Furniture Catalog

The following selection was chosen from a larger catalog of in-house furniture collections to present a selection of contemporary design concepts in indoor and outdoor environments.

# Ocean

The Ocean Dining series is made of a unique triangular aluminum tube (thickness 2.0) specially designed by us. This guarantees a distinctive and round touch feeling.

Woven in style and high quality textile rope, as well as the arms made of teak, which is also protected against high temperatures, complete the Ocean series.

All cushions are made of quick-drying foam - UV-resistant, environmentally friendly and easy to clean.

CQFE-9282-U

CQFE-9322

# Mol

This series was woven from start to finish with only one PE rattan rope. This whole range is durable, stable and slightly elastic.

The top of the coffee table is made of HPL. This makes it waterproof, sun resistant, fire resistant, scratch resistant and does not absorb stains.

Like our Ocean series, the cushions are made of sun-resistant fabric and quick-drying foam.

CPFE-9137B

# Base

The Base series mixes three similar colored materials that look similar and uniform at first glance. Only upon closer inspection do the subtle differences become apparent.

The use of flat rattan around the frame increases the tension of the rattan which makes for a pleasant feel.

Outdoor Teslin rope is used for the backrest. Both the seat and the legs are woven from round rattan, which ensures wonderfully comfortable seating.

CPFE-9219D

# Italy

From the color coordination and the curvature of the backrest, our Italy series has integrated the elements of the outer wall of the Colosseum, thus incorporating historical traces - also due to the mixture of red-brown and snow-white Teslin weave.

The matching aluminum frame as a key effect of the weave makes the whole product look more integrated. The handrail was made with teak.

The matching round table top is made of waterproof HPL, as usual sun resistant, fire resistant and scratch resistant.

CPFE-389

CPFE-9194

# Timeless

For our Timeless series, we have taken inspiration from the Ming style, which has earned us great popularity, especially in the international design world.

Various details create this seemingly simple form, while maintaining the classic scientific man-machine structure.

The aluminum frame is finished with a wood grain. Outdoor durability and ease of maintenance are assured while maintaining the unique historic charm.

CPFE-4289D

# 421

In the 421 series, we have been inspired by the mysterious mountain world.

From different angles, a variation of different levels becomes visible. The high and low swaying shape creates an orderly light and beautiful shadow play.

Using traditional design and material, the stable principle of triangle is used for the whole aluminum frame, which brings a rust-proof and stable overall appearance.

CPFE-T128

# Swing

Thermal expansion and contraction PE rattan leather is exceptionally soft and comfortable. Also, thanks to its great shrinkage and elasticity, the Swing series is ideal for outdoor use.

Brown colors belong to a neutral warm tone and complete the overall concept. The whole set is simply knitted vertically and merges into comfortable coziness which is elegant, understated and solemn.

High density and crisscrossing weave as well as a flat rattan knit pattern not only increases the stability of the Swing line, but also brings incredible comfort for the user.

CPFE-9242

CPFE-4287

# Nature

Nature series takes up the most familiar elements of the plant world.

Specifically, the design is expanded and refined to create organic and natural style elements. To give a fresh and new feeling, the green color attracts the vitality of spring.

The curve of the frame is smooth, like a growing vine, in addition light and dynamic.

The seat and back of the chair are curved, creating a comfortable feeling of security.

CPFE-370B

# Unwind

Welcome to the vacation.

The design concept "Unwind" comes from the unity of functional utility and decorative design with a view to the style of the rococo period.

The style of rococo is characterized by lightness, elegance and an exuberant use of curved, natural shapes in ornamentation.

The maximum comfortable round base and wicker details of high quality rattan create a three-dimensional feeling... The parasol on the top can be folded back.

CPFE-7121

# Town

The Town series was made of aluminum through the bank, with our already familiar triangular aluminum tube frame thickness 2.0 (mm).

Town is formed by a completely seamless main frame with a transition into the three-dimensional space. The dark gray paint finish gives it a delicate and exquisite look. In addition, the matte pink-grey exterior paint makes the vertical round aluminum tube look extremely comfortable.

The cushion is made of selected and sun-resistant fabric. A flower-printed cushion brings out a cozy warmth even from the coldest metal. Flowers are known to have positive effects on the human brain. In particular, the effect of the favorite flower is noteworthy.

This increases the feeling of happiness by a fabulous 200%. In addition, a special dyeing technique of the fabric ensures color fastness and long-lasting durability. The foam is adapted to the shape of the chair, feels soft, comfortable and durable.

CPFE-4283C

CPFE-4283D

# Mykonos

Mykonos - the high society island, where the international and Greek jet set meets white houses with doors and windows in intense blue, which are closely lined up in the narrow streets, balconies everywhere, richly decorated with wonderful fragrant flowers, in front of you is only the crystal clear sea.

You sit in a taverna by the harbor, covered by vines, and order one of the delicious Greek wines while you soak up the atmosphere. The Mediterranean design concept of our Mykonos line creates the perfect space to relax.

Its free-form modularity allows for different combinations. Suitable for all types of spaces and different functions of use. The single sofa can be used sitting or lying down and each armrest of the sofa has its own storage space. The design also provides the function of an ice bucket.

The storage and the top cover of the ice bucket are made of HPL material. The top cover of the ice bucket can be used as a safe storage for your wine glass. Various combinations can be built to create completely flexible atmospheres.

CPFE-984A

# Attract

The color of the frame, rattan and table as well as the uniform bronze create mementos and warmth. Things with which you associate a story.

The design of the chair collection is a contemporary concept, the handrails are tightly wrapped with rattan, round curves stretch gracefully.

Different weaving methods and the right choice of materials make each piece of furniture a finely crafted piece.

CPFE-4141D

# FAQ

## Material Intro

**Aluminum:** We use high quality aviation aluminum alloy, which can meet the toughest requirements and is also completely rustproof of course. The surfaces are sprayed with professional outdoor electrostatic powder.

**Rattan:** Our rattan warranty is 3 years, but the rattan can be used for at least 5 years.

*Weaving Skills:* The difference between our products and others: We use long rattan to reduce nail fastening, which reduces the risk of rattan loss. This leads to more production time for the worker.

### **Cushions:**

1. We use three different fabrics at different prices, the biggest difference between them is the color fastness (or fading time) for outdoor use. The requirements are significantly stricter than indoor fabrics (domestic fabric - color fastness about 1 year; sun resistant fabric - color fastness 3 years; Sunbrella fabric - over 5 years).

2. Our new 100% waterproof outdoor fabric: waterproof, but with a hard structure.

*Foam:* We mainly use a quick drying foam and 38 high density foam. The cushions are made of dolly foam.

1. when using the quick drying foam, the cushion needs about 15-20 minutes to dry in the sun. The 38 high density foam is soft, comfortable and suitable for product in semi-indoor or outdoor areas. It is cost effective and suitable for customers with lower budgets.
